Preface	ix
To Michael, David, and Jeffrey	xi
Introduction	xiii
1 Motivation for the Notion of Measure	1
1.1 The Riemann Integral	3
1.2 The Lebesgue Integral	5
2 Measurable Sets and Lebesgue Measure	11
2.1 Sigma Algebras and Borel Sets	11
2.2 Definition of Lebesgue Measure	19
2.3 Lebesgue Measure on $\sigma(P(\mathbb{R}))$: An Attempt and Failure	22
2.4 Lebesgue Measurable Sets: $\mathcal{M}_L \subsetneq \sigma(P(\mathbb{R}))$	31
2.5 Calculating Lebesgue Measure	37
2.6 Approximating Lebesgue Measurable Sets	39
2.7 Important Properties of Lebesgue Measure	40
2.7.1 Regularity	41
2.7.2 Continuity	42
2.8 Discussion on $\mathcal{B}(\mathbb{R}) \subsetneq \mathcal{M}_L$	44
3 Measurable Functions	47
3.1 Extended Real-Valued Functions	47
3.2 Alternative Definitions of Measurability	48
3.3 Examples of Measurable Functions	51
3.3.1 Continuous Functions	53
3.3.2 Characteristic or Indicator Functions	59
3.3.3 A Nonmeasurable Function	62

3.4	Properties of Measurable Functions	62
3.4.1	Elementary Function Combinations	64
3.4.2	Function Sequences	69
3.5	Approximating Lebesgue Measurable Functions	75
3.6	Distribution Functions of Measurable Functions	80
4	Littlewood's Three Principles	89
4.1	Measurable Sets	89
4.2	Convergent Sequences of Measurable Functions	91
4.3	Measurable Functions	93
5	General Borel Measures on \mathbb{R}	95
5.1	Distribution Functions from Borel Measures	98
5.2	Borel Measures from Distribution Functions	100
5.2.1	From F -Length to a Measure on an Algebra	102
5.2.2	To a Measure on a Sigma Algebra	106
5.3	Consistency of Borel Constructions	114
5.4	Important Properties of Borel Measures	116
5.5	Approximating Measurable Sets under a Borel Measure	117
5.6	Differentiable F -Length and Lebesgue Measure	120
6	Generating Measures by Extension	123
6.1	Recap of Lebesgue and Borel Procedures	123
6.2	Extension Theorems	124
6.2.1	From Outer Measure to Complete Measure	125
6.2.2	Measure on an Algebra to Outer Measure	128
6.2.3	Approximating Carathéodory Measurable Sets	129
6.2.4	Pre-Measure on Semi-Algebra to Measure on Algebra	130
6.2.5	Uniqueness Of Extensions	135
6.3	Summary - Construction of Measure Spaces	138
6.4	Approaches to Countable Additivity	140
6.4.1	Countable Subadditivity on a Semi-Algebra	140
6.4.2	Countable Additivity on an Algebra	141
6.5	Completion of a Measure Space	143
7	Finite Products of Measure Spaces	147
7.1	Product Space Semi-Algebras	147
7.2	Properties of the Semi-Algebras	152
7.3	Measure on the Algebra \mathcal{A}	154
7.3.1	Finite Additivity on the Semi-Algebra \mathcal{A}'	156

7.3.2	Countable Additivity on the Algebra \mathcal{A} for σ -Finite Spaces	163
7.4	Extension to a Measure on the Product Space	169
7.5	Well-Definedness of σ -Finite Product Measure Spaces	170
7.6	Products of Lebesgue and Borel Measure Spaces	175
7.7	Regularity of Lebesgue and Borel Product Measures	177
8	More General Borel Measures on \mathbb{R}^n	183
8.1	The Borel σ -Algebra on \mathbb{R}^n	183
8.2	Borel Measures and Induced Functions	185
8.2.1	Functions Induced by Finite Borel Measures	186
8.2.2	Borel Measures Induced by Functions	190
9	Infinite Product of Probability Spaces	199
9.1	A Naive Attempt	199
9.2	A Semi-Algebra Structure	201
9.3	Finite Additivity on the Semi-Algebra \mathcal{A}' in Probability Spaces	203
9.4	"Free" Countable Additivity on Finite Probability Spaces	205
9.5	Countable Additivity on Algebra \mathcal{A}^+ in Probability Spaces on \mathbb{R}	209
9.5.1	Outline of Countable Additivity Proof	210
9.5.2	The Algebra \mathcal{A}^+ and Finite Additivity of μ_A	213
9.5.3	Countable Additivity on \mathcal{A}^+	218
9.6	Extension to a Measure on the Product Space $\mathbb{R}^{\mathbb{N}}$	221
9.7	Probabilities of Infinite Dimensional Rectangles in $(\mathbb{R}^{\mathbb{N}}, \sigma(\mathbb{R}^{\mathbb{N}}), \mu_{\mathbb{N}})$	223
	References	225
