Preface	ix
to Michael, David, and Jeffrey	xi
Introduction	xiii
1 μ-Measurable Functions	1
1.1 Properties of Measurable Functions	2
1.2 Limits of Measurable Functions	4
1.3 Approximating μ -Measurable Functions	7
1.4 The Functional Monotone Class Theorem	11
2 General Integration Theory	17
2.1 Integrating Simple Functions	19
2.2 Integrating Nonnegative Measurable Functions	22
2.2.1 Product Space Measures Revisited	32
2.3 Integrating General Measurable Functions	35
2.4 Integration to the Limit	39
2.4.1 Uniform Integrability Convergence theorem	43
2.5 Lebesgue-Stieltjes Integrals by Riemann Sums	46
2.5.1 Lebesgue-Stieltjes Integrals on \mathbb{R}	48
Lebesgue-Stieltjes vs. Riemann-Stieltjes Integrals . . .	49
2.5.2 Lebesgue-Stieltjes Integrals on \mathbb{R}^n	50
Lebesgue-Stieltjes vs. Riemann-Stieltjes Integrals . . .	53
3 Change of Variables Results	55
3.1 Change of Measure in Lebesgue-Stieltjes Integrals	56
3.2 Transformations and Change of Variables	62
3.2.1 Measures Induced by Transformations	62

3.2.2	General Change of Variables Under Transformations	65
3.3	Special Cases of Change of Variables	69
3.3.1	Method of Substitution in Riemann and Lebesgue Integrals on \mathbb{R}	69
3.3.2	Change of Variables for Linear Transformations on \mathbb{R}^n	71
3.3.3	Change of Variables for Differentiable Transformations on \mathbb{R}^n	75
4	The L_p Spaces	85
4.1	Introduction to Banach Spaces	85
4.2	The $L_p(X)$ -Spaces	90
4.3	Approximating Functions in $L_p(X)$ -Spaces	96
4.4	Further Properties of the $L_p(X)$ -Spaces	97
4.4.1	Bounded Linear Functionals	98
4.4.2	The Special Case of $p = 2$, Hilbert Space	100
5	Integrals in Product Spaces	105
5.1	Discussion on Product Space Sigma Algebras	105
5.2	Introduction to the Fubini and Tonelli Theorems	112
5.3	Preliminary Results for Characteristic Functions	113
5.4	Fubini's Theorem	119
5.4.1	Generalizing Fubini's Theorem	121
5.4.2	Fubini's Theorem in $\sigma'(X \times Y)$	123
5.5	Tonelli's Theorem	126
6	Applications of Fubini/Tonelli	133
6.1	Lebesgue-Stieltjes Integration by Parts	134
6.2	Integrability of the Convolution of Functions	142
6.3	Fourier Transforms of Finite Borel Measures	147
6.3.1	Integration of Complex Valued Functions	147
6.3.2	Fourier Transforms	149
	Properties of Fourier Transforms	153
6.3.3	Fourier Inversion: From $\phi_F(t)$ to μ_F	161
6.3.4	The Special Case of Integrable $\phi_F(t)$	166
	Integrability Versus Growth at $\pm\infty$	167
	Lebesgue Integrable $\phi_F(t)$	169
6.3.5	Continuity Theorem for Fourier Transforms	172

CONTENTS

vii

7	General Measure Relationships	179
7.1	Decomposition of Borel Measures on $(\mathbb{R}, \mathcal{B}(\mathbb{R}), m)$	180
7.2	Decomposition of σ -Finite Measures	185
7.2.1	A Digression into Signed Measures	186
7.2.2	The Radon-Nikodým theorem	192
7.2.3	The Lebesgue Decomposition Theorem	202
	References	207
