Preface	ix
to Dorothy and Domenic	xi
Introduction	xiii
1 Probability Spaces	1
1.1 Probability Theory: A Very Brief Historical Snapshot	1
1.2 A Finite Measure Space, But With a "Story"	3
1.2.1 Bond Loss Example	8
1.3 Some Probability Measures on \mathbb{R}	13
1.3.1 Discrete Probability Measures	13
1.3.2 Continuous Probability Measures	19
1.3.3 More General Probability Measures	23
1.4 Independent Events	24
1.4.1 Independent Classes and Associated Sigma Algebras .	27
1.5 Conditional Probability Measures and Applications	32
1.5.1 Law of Total Probability	33
1.5.2 Bayes' Theorem	37
2 Limit Theorems on Measurable Sets	41
2.1 Introduction to Limit Sets	41
2.2 The Borel-Cantelli Lemma	44
2.3 Kolmogorov's Zero-One Law	50
3 Random Variables and Distribution Functions	55
3.1 Introduction and Definitions	55
3.1.1 Bond Loss Example (Continued)	58
3.2 Inverse of Distribution Functions	62
3.3 Random Vectors and Joint Distribution Functions	70

3.3.1	Marginal Distribution Functions	74
3.3.2	Conditional Distribution Functions	76
3.4	Independent Random Variables	79
3.4.1	Sigma Algebras Generated by R.V.s	79
3.4.2	Independent Random Variables and Vectors	80
3.4.3	Distribution Functions of Independent Random Variables	83
3.4.4	Independence and Transformations	85
4	Samples of Random Variables	87
4.1	Probability Spaces for Independent Samples	87
4.1.1	The Probability Space $(\mathcal{S}', \mathcal{E}', \mu')$ and Sample $\{X_j\}_{j=1}^N$	88
4.2	Simulating Samples of Random Variables - Theory	90
4.2.1	Distributional Results	91
4.2.2	Independence Result	95
5	Limit Theorems for Random Variable Sequences	97
5.1	Two Limit Theorems for Binomial Sequences	97
5.1.1	The Weak Law of Large Numbers	97
5.1.2	The Strong Law of Large Numbers	101
5.1.3	Strong Laws Versus Weak Laws	106
5.2	Convergence of Random Variables 1	107
5.2.1	Notions of Convergence	107
5.2.2	Convergence Relationships	110
5.2.3	Slutsky's Theorem	115
5.2.4	Kolmogorov's Zero-One Law	118
6	Distribution Functions and Borel Measures	125
6.1	Univariate Distribution Functions	126
6.1.1	Borel Measures from Distribution Functions	127
6.2	Multivariate Distribution Functions	131
6.2.1	Joint Distribution Functions	131
6.2.2	Marginal Distribution Functions	134
6.2.3	Conditional Distribution Functions	135
7	Copulas and Sklar's Theorem	137
7.1	Fréchet Classes	137
7.2	Copulas and Sklar's Theorem	139
7.3	Partial Results on Sklar's Theorem	145
7.4	Examples of Copulas	148

7.4.1	Archimedean Copulas	150
7.4.2	Extreme Value Copulas	155
7.5	General Result on Sklar's Theorem	160
7.5.1	The Distributional Transform	163
7.5.2	Sklar's Theorem - The General Case	167
7.6	Tail Dependence and Copulas	168
8	Weak Convergence of Distribution Functions	175
8.1	Definitions of Weak Convergence	176
8.2	Properties of Weak Convergence	180
8.3	Weak Convergence and Left Continuous Inverses	186
8.4	Skorokhod's Representation Theorem	188
8.4.1	Mapping Theorem on \mathbb{R}	190
8.5	Convergence of Random Variables 2	192
8.5.1	Mapping Theorem on \mathbb{R}	192
8.5.2	The Delta-Method	194
9	Estimating Tail Events 1	201
9.1	Large Deviation Theory 1	202
9.2	Extreme Value Theory 1	208
9.2.1	Introduction and Examples	208
9.2.2	Extreme Value Distributions	212
9.2.3	The Fisher-Tippett-Gnedenko Theorem	215
9.2.4	Finance Applications - The Pickands-Balkema-de Haan theorem	226
	Percentile Estimation	226
	Tail Probability Estimation	227
9.2.5	γ in Theory - von Mises' Condition	233
9.3	Multivariate Extreme Value Theory	239
9.3.1	Multivariate Fisher-Tippett-Gnedenko Theorem	239
9.3.2	Characterizations of G and C_G	242
	The Extreme Value Distribution G	243
	The Extreme Value Copula C_G	246
9.3.3	Upper Tail Dependence and Extreme Value Copulas	254
	References	259
