Preface	ix
to Dorothy and Domenic	xi
Introduction	xiii
1 Distribution Functions	1
1.1 A Characterization of Distribution Functions on \mathbb{R}	1
1.2 Examples of Distribution Functions on \mathbb{R}	5
1.2.1 Discrete Distribution Functions	5
1.2.2 Absolutely Continuous Distribution Functions	10
1.2.3 Mixed Distribution Functions	17
1.2.4 Other Distribution Functions	19
1.3 Distribution Functions of Transformed Random Variables	19
1.4 Distribution Functions of Sums and Ratios of RVs	22
1.4.1 Sums of Independent Random Variables	22
Distribution Functions of Sums	23
Density Functions of Sums	27
1.4.2 Ratios of Random Variables	28
Independent Random Variables	28
A Special Case without Independence	33
2 Order Statistics	37
2.1 Distribution Functions for k th Order Statistics	37
2.2 Density Functions for k th Order Statistics	39
2.3 Joint Distribution of all Order Statistics	40
2.4 Multivariate Density Functions	44
2.4.1 Joint Density of all Order Statistics	45
2.4.2 Marginal Densities of Order Statistics	46
2.4.3 Conditional Densities of Order Statistics	49

2.5	The Rényi Representation Theorem	52
3	Expectations of Random Variables 1	59
3.1	General Definitions	59
3.1.1	Is Expectation Well Defined?	62
3.1.2	Formal Resolution of Well-Definedness	64
3.2	Moments of Distributions	66
3.2.1	Common Types of Moments	67
3.2.2	Moment Generating Function	68
3.2.3	Moments of Sums of RVs	70
	Theory	70
	Applications	73
3.2.4	Properties of Moments and the M.G.F.	77
3.2.5	Examples of Moments and M.G.F.s	80
	Discrete Distributions	80
	Continuous Distributions	83
3.2.6	Moments and Inequalities	87
	Chebyshev's Inequality	87
	Jensen's Inequality	89
	Kolmogorov's Inequality	92
	Hölder's and Related Inequalities	93
3.2.7	Uniqueness of Moments and the M.G.F.	97
3.2.8	Weak Convergence and Moment Limits	104
4	Simulating Samples of RVs - Examples	115
4.1	Random Samples	116
4.1.1	Discrete Distributions	116
4.1.2	Continuous Distributions	119
4.2	Ordered Random Samples	121
4.2.1	Direct Approaches	122
4.2.2	Using the Rényi Representation	124
5	Limit Theorems	127
5.1	Introduction	127
5.2	Weak Convergence of Distributions	131
5.2.1	Poisson Limit Theorem	131
5.2.2	"Weak Law of Small Numbers"	132
5.2.3	De Moivre-Laplace Theorem	135
5.2.4	The Central Limit Theorem 1	140

5.2.5	Smirnov's Limit Theorem on Order Statistics of the Uniform Distribution	143
5.2.6	Limit Theorem on Quantiles of General Distribution Functions	147
5.2.7	A Limit Theorem on Exponential Order Statistics	149
5.3	Laws of Large Numbers	150
5.3.1	Tail Events and the Kolmogorov 0 – 1 Law	151
5.3.2	Weak Laws of Large Numbers (WLLNs)	153
5.3.3	Strong Laws of Large Numbers (SLLNs)	158
5.3.4	Limit Theorem on Quantiles	163
5.4	Convergence of Empirical Distribution Functions	165
5.4.1	Definition and Basic Properties	167
5.4.2	The Glivenko-Cantelli Theorem	172
5.4.3	Distributional Estimates for $D_n(s)$	174
6	Estimating Tail Events 2	179
6.1	Large Deviation Theory 2	179
6.2	Extreme Value Theory 2	191
6.2.1	The Hill Estimator, γ_H	193
	1. If $F \in D(G_\gamma)$ with $\gamma > 0$, then F is Conditionally Asymptotically Pareto	196
	2. If $F \in D(G_\gamma)$ with $\gamma > 0$, then $\gamma_H \approx \gamma$	205
	3. If $F \in D(G_\gamma)$ with $\gamma > 0$, then $\gamma_H \rightarrow_P \gamma$ as $n \rightarrow \infty$	211
	Asymptotic Normality of the Hill Estimator	216
6.2.2	The Pickands–Balkema–de Haan Theorem: $\gamma > 0$	217
	References	223
